LARGEST AND FLATTEST CONTACT AREA

SAVE TIME

FASTER AND LESS EFFORT THAN OTHER TOOLS

SAVE CASH

REUSE TRIM AND QUARTER ROUNDS

A REVOLUTIONARY NEW PRODUCT

TRIM PULLER

A revolutionary, patented tool that does all the work of a pry bar and claw but without the damage. The Trim Puller is designed specifically for repair or remodel projects where you aren't destroying but rather reusing your trim, cabinets, flooring and other materials.

What sets the Trim Puller apart from other tools is the contact area combined with the 15° wedged center for easy extraction. The Trim Puller has the largest and flattest contact area versus the single contact areas found on a pry bar or a claw. No shim or small board spacer is needed.

THIS STINKS

THIS RULES!

STOP DAMAGING WALLS

The Trim Puller is superior as it is less likely to damage the wall or materials being removed. Plus, it doesn't need any type of shim or small board spacer as the others do. This unique tool provides the necessary leverage for clean removal without breakage.

IT'S AMAZINGLY EASY!

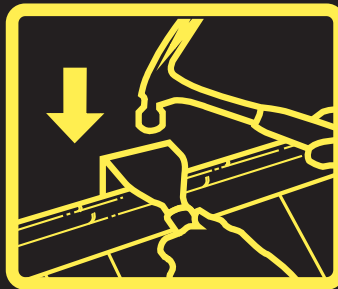

No shim or small board spacer needed

Step 1

Use a utility knife or painters 5-in1 tool to score top of seam where trim meets the wall.

Step 2

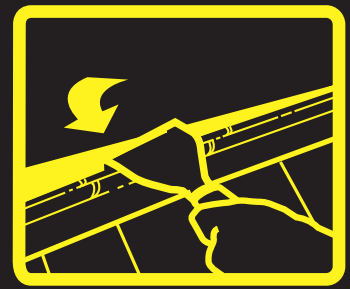

Position Trim Puller's front face against the wall with the sharp edge on the seam where trim meets the wall. For best results start at the end of baseboard strip.

Step 3

Strike top of Trim Puller with hammer or hard mallet driving the Trim Puller between the trim and the wall. The wedge will begin to separate the trim from the wall.

Step 4

Once the Trim Puller is wedged between the trim and the wall gently pry the trim away from the wall creating a gap of approximately 4" to 8". Repeat Steps 2 – 4 moving the Trim Puller along the wall in 12" increments or as needed. The gap in Step 4 will increase with each pull until removed.
